

The right tool for a continuous job!

Origin Engines are designed for industrial use from the get-go. These aren't re-purposed truck engines that you have to retrofit to your application. Origin Engines are 100% new engines - built to be industrial engines from the start.

Origin Engines are based off of the big block 454 and small block 350 designs. In addition to cast iron block and heads, less complex overhead valve train, and improved priority lubrication system every part in these engines has been redesigned for continuous use. The result? A simpler, more rugged design that meets modern emissions requirements.

Models

- 8.0L 171HP LP / 159HP NG
- 9.1L 194HP LP / 179HP NG
- 10.3L 222HP LP / 203HP NG

Features

Standard Equipment

- Air cleaner
- Cooling System with Suction fan
- Exhaust system with Catalyst
- Heavy Duty skid base
- Control panel with safety shutdowns
- Oil drain hose
- Battery Cables
- Engine mounting structure made of heavy-duty steel.

Warranty

- 3-year/2,500-hour Engine warranty is standard on all units.

Available Options

- Speed reducers
- Manual PTO clutch
- Berkeley Pumps
- Oil and Coolant Sight Gauges
- Batteries
- Auto-start capability
- Heavy duty off-road trailer
- Hydraulic pump drive

Many additional options available for special configurations!
